**Overall verdict: executed in full, not accepted.** All sections V–G were run with build 1.2.1 (18) on Android 16 emulator (G1) and Linux Flatpak (G2) with new accounts (N1 `fnt-1028b-n1`, N2 `fnt-1028b-n12`, I2 `fnt-1028b-i2`), the two-user checks of section E before deleting in F. **No step failed.** G-07 (person without prior knowledge) is open, G-04 is optional and was not run; D-07 (server access) and G-08 (web) are n/a. Confirmed in build 18: #10, #11, #12, #14, #23, the fixes of PR #41 (#26, #29, #31–#40) and of PR #52 (#44, #45, #46). 5 new findings, filed as issues (see Findings); #43 observed: the rejection of a family-code request arrives after about 2 minutes.

## Platform and system (plan section 2)

| Item | G1 (device 1) | G2 (device 2) |
|---|---|---|
| Platform | Android (emulator) | Linux (Flatpak) |
| Device | Android Emulator, AVD Pixel_8_API_36 (x86_64) | PC, Manjaro Linux; app on its own X server (Xvfb :99, window 900 × 1050) |
| Operating system | Android 16 (API 36) | Manjaro Linux, kernel 6.18.49 |
| Installation source | Release APK v1.2.1 build 18 (run 40638701954, from bb7f347), sha256 and signature checked, installed via adb; the x86_64 emulator starts the release APK (#32 fixed) | Flatpak bundle v1.2.1 build 18 from the release (run 40638705040), sha256 checked |
| App version target / actual | 1.2.1 (18) / versionCode 18, 1.2.1 | 1.2.1 (18) / build_number 18 |
| Device language, screen lock | English (en-US), app set to German / PIN set via adb (removed after the run) | German (de_DE) / no device authentication for apps |
| Screenshots | `adb emu screenrecord screenshot` (B-18: `adb exec-out screencap`) | Window capture on the X server (python-xlib) |
| Tester | Claude Code: Android via adb/uiautomator, Linux via XTEST mouse/keyboard events and OCR (tesseract). Passwords and emergency keys are masked in all images; all accounts are synthetic test data. | |

**Deviations:** The plan asks for G1 = iPhone and G2 = Mac for the Apple submission; as requested, this run covers Android (G1) and Linux (G2) and does not replace the Apple run. Steps whose system dialogs would open on the tester’s real desktop under Flatpak (file picker, mail client, notifications) were run on Android: A-10 “Save as file”, E-05 e-mail (draft not checkable: only the Gmail setup appears), E-17 sent from Android to Linux. adb cannot type umlauts → substitute spelling (e.g. “Kueche”); umlauts were checked on Linux. The date parts 1028 and 1028c were taken by foreign accounts and not used. The emulator crashed once (qemu, during B-16) and was restarted; the app data were kept.

## Findings

| No. | Severity | Step | Description | Issue |
|---|---|---|---|---|
| L2-2 | MEDIUM | E-25 | Accessibility: in the “Report sent.” snackbar the action “Block sender” is hardly legible in the dark theme (dark text on a dark snackbar), on Android and Linux. The action works but is practically invisible. | #62 |
| L1-2 | MEDIUM | B-08 | Event detail page after “Edit event” → “Save”: the title is updated, the time is not. After changing 10:00 to 12:00 (or switching “All day” on) the detail still shows “10:00 – 11:00”; the list and reopening show the correct state. Android and Linux. | #63 |
| L1-1 | LOW | B-05 | Time picker in the event editor: in text input mode the dialog rejects every hour above 12 (“Enter a valid time”) although display and dial show 24 hours. Occurs when the device uses the 12-hour format (Android en-US) and the app is set to German; on Linux (de_DE) the text input accepts 21. The dial works. | #64 |
| L1-4 | LOW | E-16 | Unread counter (“Today” tile, badge on the Chat tab) counts the undecryptable events from before joining for a new member: “7” or “8 unread messages” for a single readable new message; the chat shows only the summary note (#35) for them. | #65 |
| L1-3 | LOW | E-05 | Android phone: after “Copy link” in the “Invite someone” dialog the confirmation “Link copied.” is hidden behind the dialog and only visible after “Close”. Visible on the desktop (Linux, run 2). | #66 |
| #43 | NOTE | D-02 | The rejection of a family-code request reaches the requester only after about 2 minutes in both runs (run 1: 07:45:22 → 07:47:19, run 2: 09:17:43 → 09:19:42; clocks of PC, emulator and server in sync). Within the plan (≤ 3 min), but not the 10–20 s of `Nachtest_Build18.md`. Suspected cause (not verified on the server): `_pollRejection` polls `/sync` every 10 s without `since` and with the same filter; Synapse answers identical sync requests from its response cache for up to 2 minutes. Remedy idea: keep `next_batch` and pass it as `since`, or query the room state directly. | #43 |
| Fixes | FIXED | several | Confirmed in build 18: #10, #11, #12, #14, #23; the fixes of PR #41 (#26, #29, #31–#40, e.g. release APK runs on x86_64, direct chat opens correctly, summary note instead of undecryptable messages, Enter sends on desktop, German dates and symbol names) and of PR #52 (#44 “Anna” rejected, #45 report snackbar closes by itself, #46 event set to “Private” no longer shows “Deleted”). | – |

Finding numbers: L1-x first seen in run 1, L2-x first seen in run 2; both runs use the same numbering. Issues #62–#68 were filed from these runs; plan notes P-39–P-47 in #69; #44, #45, #46 commented as retested.

## Notes on the plan (version v1.5)

| No. | Concerns | Note |
|---|---|---|
| P-39 | Sec. 2, B-17, appendix D | Linux has the “App lock” switch (it just cannot be switched on, #67); only “Screen protection” is missing. The plan says “no app lock”. |
| P-40 | V-03, header | Release v1.2.1 contains APK/AAB and Flatpak build 18 (`bb7f347`) since 28 Oct; the release APK runs on x86_64 (#32). “Release APK crashes, use the debug APK” and “release files build 16” are outdated. |
| P-41 | B-18, sec. 2 | `adb emu screenrecord screenshot` bypasses FLAG_SECURE (also the live preview in the app overview). Check screen protection with `adb exec-out screencap`; switching protection off for the other images is not needed. |
| P-42 | B-20, E-19 | “Default reminder” and the calendar filter are multi-select chips: “change to 30 minutes” means select 30 and deselect 10; filter “Test Nutzer 2” means deselect “Test N1”. |
| P-43 | E-02 | The chat shows the family name only when there are several conversations (tabs); “new name everywhere (family, chat)” can only be checked in the Family tab before E-18. |
| P-44 | E-05 | “Send by e-mail”: Android without a Gmail account shows only the Gmail setup, the Linux Flatpak opens the mail client of the real desktop – the draft cannot be checked in either case; name an alternative in the plan. |
| P-45 | D-02, Nachtest_Build18.md | The plan expects up to 3 min, the retest 10–20 s. Decide on one expectation (see #43). |

| No. | Concerns | Note |
|---|---|---|
| P-46 | A-10, E-17, appendix D | Under the Linux Flatpak (Xvfb) file picker and save cannot be automated; run 2 therefore reversed E-17 and checked “Save as file” on Android (D-01, E-10). State this as a fixed rule in the plan. |
| P-47 | Appendix D | The Android key field (multi-line) can only be cleared reliably via adb with Ctrl+End/Del; tesseract needs `-l deu` on Manjaro (no eng package installed). |

## End state of the master data

N1 `fnt-1028b-n1`, N2 `fnt-1028b-n12`, I2 `fnt-1028b-i2`: deleted (login returns HTTP 403 `M_FORBIDDEN`). `fnt-1028b-n9` never created. Registration on the test server remains open. Linux: the tester’s own Flatpak data were moved aside before run 1 and restored unchanged after run 2. Android: test files removed, PIN cleared, emulator stopped after run 2. Passwords and keys exist only in the git-ignored `secure/` folder.
